Academies

Towards climate sustainability in the academic system in Europe and beyond

APRIL 20, 2023

ASTRID EICHHORN

(DIE JUNGE AKADEMIE & UNIV. OF SOUTHERN DENMARK)

ALLEA working group on climate sustainability in the academic system

- ALLEA: European Federation of Academies; member academies from about 40 countries; working groups on topics in evidence-based policy advice and in science policy
- Report published May 5, 2022
- Available at:
DOI: 10.26356/climate-sust-acad
or at www.allea.org

Three key messages:

Three key messages:

- The academic system is currently not climate sustainable.

Three key messages:

- The academic system is currently not climate sustainable.
- Individual stakeholders are taking first steps towards climate sustainability.

Three key messages:

- The academic system is currently not climate sustainable.
- Individual stakeholders are taking first steps towards climate sustainability.
- There are many options of action available right now for all stakeholders to become more climate sustainable.

The academic system in the context of the climate crisis

- Academia is part of the solution through research, education, evidence-based policy advice
- Academia is part of the problem through emissions from own operations

The academic system in the context of the climate crisis

- Academia is part of the solution
through research, education, evidence-based policy advice
- Academia is part of the problem
through emissions from own operations
→ Data and examples

The academic system in the context of the climate crisis

- Academia is part of the solution
through research, education, evidence-based policy advice

- Academia is part of the problem
through emissions from own operations

→ Data and examples

IPCC (2022):

300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit global warming below 1.5 degrees → 1 t per capita per year until 2050

Data on climate impact

IPCC (2022):
300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit
global warming below 1.5 degrees → 1 t per capita per year until 2050

Stakeholders:

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

Data on climate impact

IPCC (2022):
300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit global warming below 1.5 degrees → 1 t per capita per year until 2050

Stakeholders:

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

IPCC (2022):
300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit global warming below 1.5 degrees → 1 t per capita per year until 2050

Stakeholders:

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

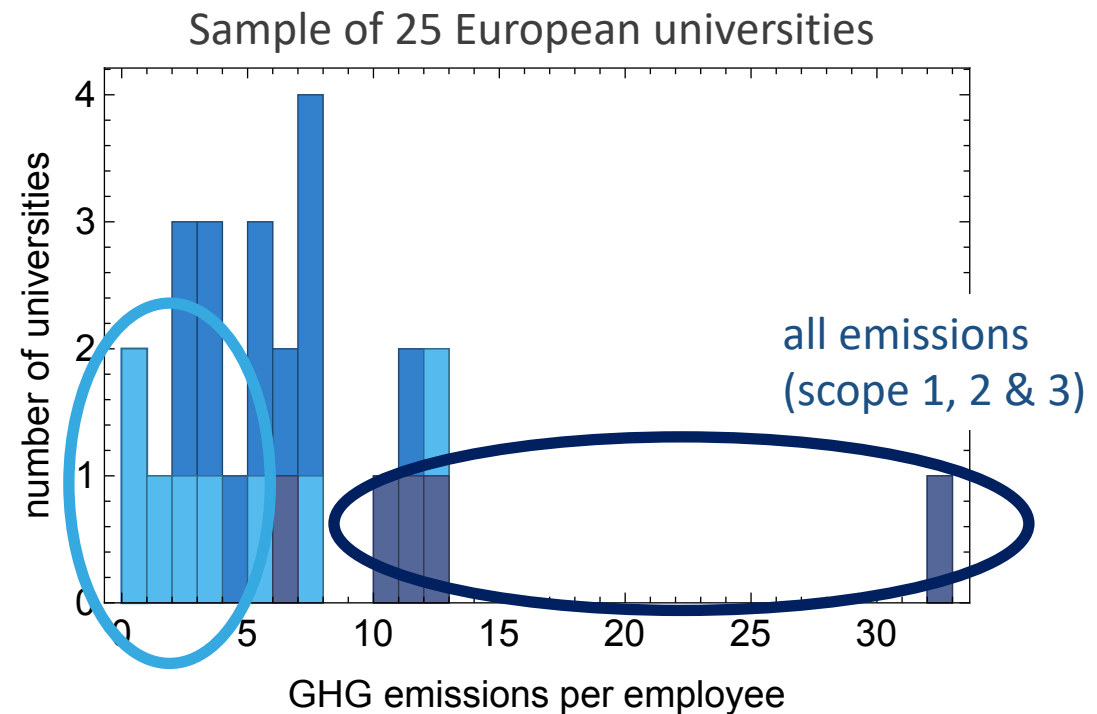

Data on climate impact

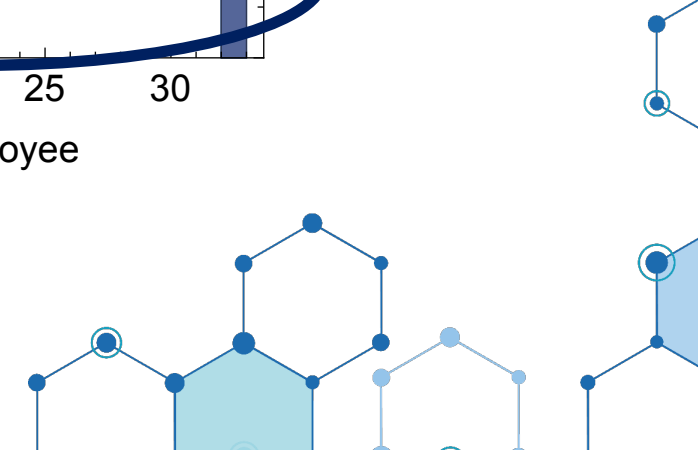

IPCC (2022):
 300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit
 global warming below 1.5 degrees → 1 t per capita per year until 2050

Stakeholders:

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

only electricity & heating
 (scope 1 & 2)

Data on climate impact

IPCC (2022):
300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit global warming below 1.5 degrees → 1 t per capita per year until 2050

Stakeholders:

Majority from scientific computing

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

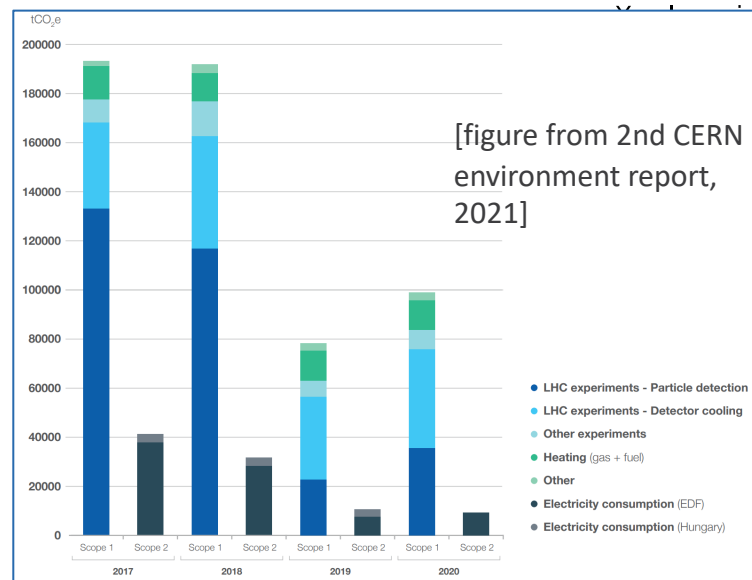

Data on climate impact

IPCC (2022):
 300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit global warming below 1.5 degrees → 1 t per capita per year until 2050

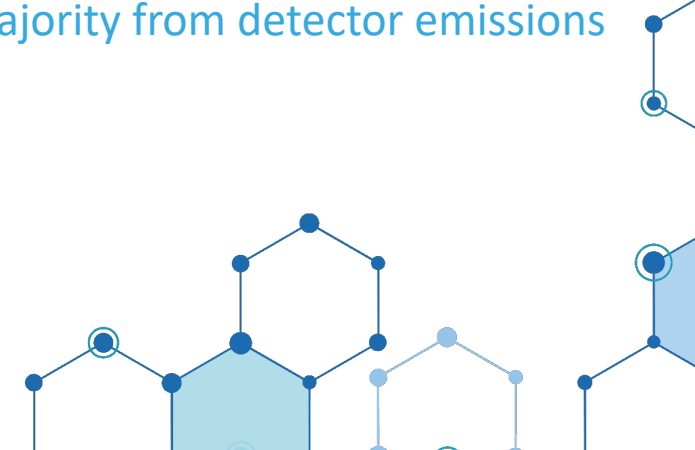

Stakeholders:

Majority from scientific computing

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

Majority from detector emissions

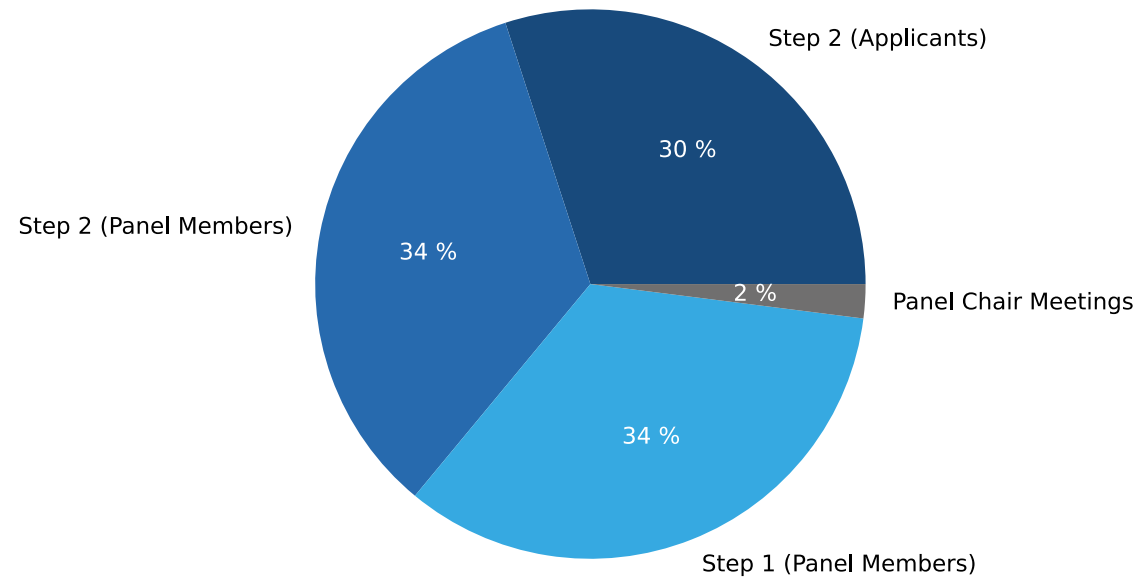

Data on climate impact

Stakeholders:

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

IPCC (2022):
300 Gigatons CO₂ emissions “remaining” for 83 % chance to limit global warming below 1.5 degrees → 1 t per capita per year until 2050

ERC interviews: ~ 1 t per interview

Data gap: no funding organization reports emissions from funded research

Climate sustainability of the academic system

Stakeholders:

- Universities
- Research institutes
- Students
- Individual academics
- Funding organizations
- Conference organizers
- Academies, learned societies
- Ranking agencies
- Policy makers

Key message 1:
The academic system is currently not climate sustainable.

What does it take for climate sustainability?

Cultural change requires change in individual behaviors and changes in framework conditions, norms and incentives

Key message 2:
Individual stakeholders are taking first steps towards climate sustainability.

What does it take for climate sustainability?

Cultural change requires change in individual behaviors and changes in framework conditions, norms and incentives

Key message 2:
Individual stakeholders are taking first steps towards climate sustainability.

Examples for current practises

1) Change without change of behavior (top-down strategy successful): Green energy on campus

What does it take for climate sustainability?

Cultural change requires change in individual behaviors and changes in framework conditions, norms and incentives

Key message 2:

Individual stakeholders are taking first steps towards climate sustainability.

Examples for current practises

- 1) Change without change of behavior (top-down strategy successful): Green energy on campus
- 2) Change with behavioral change required (top-down strategy may fail): Travel policy

What does it take for climate sustainability?

Cultural change requires change in individual behaviors and changes in framework conditions, norms and incentives

Key message 2:
Individual stakeholders are taking first steps towards climate sustainability.

Examples for current practises

- 1) Change without change of behavior (top-down strategy successful): Green energy on campus
- 2) Change with behavioral change required (top-down strategy may fail): Travel policy
- 3) Change based on experience during pandemic: virtual instead of physical mobility

What is next?

Key message 3:

There are many options of action available right now for all stakeholders to become more climate sustainable.

Recommendations

- Goal: Specific, actionable steps, not just overarching principles and general guidelines
- Many recommendations may be obvious

What is next?

Key message 3:

There are many options of action available right now for all stakeholders to become more climate sustainable.

Recommendations

- Goal: Specific, actionable steps, not just overarching principles and general guidelines
- Many recommendations may be obvious

For all stakeholders:

- Mix & match approach to meetings (in-person, hybrid, online)

What is next?

Key message 3:

There are many options of action available right now for all stakeholders to become more climate sustainable.

Recommendations

- Goal: Specific, actionable steps, not just overarching principles and general guidelines
- Many recommendations may be obvious

For all stakeholders:

- Mix & match approach to meetings (in-person, hybrid, online)
- Improve virtual communication (technology, skills and formats)

What is next?

Key message 3:

There are many options of action available right now for all stakeholders to become more climate sustainable.

Recommendations

- Goal: Specific, actionable steps, not just overarching principles and general guidelines
- Many recommendations may be obvious

For all stakeholders:

- Mix & match approach to meetings (in-person, hybrid, online)
- Improve virtual communication (technology, skills and formats)
- Base your actions on a solid evidence base - but don't stop at publishing a climate report

Recommendations: selected examples

Universities:

Students:

Research institutes:

Academies, learned societies:

Funding organizations:

Ranking agencies:

Conference organizers:

Policy makers:

Recommendations: selected examples

Universities:

- 1) Use green energy on campus
- 2) Incentivize low-carbon forms of travel
- 3) Join sustainability network to exchange best-practise ideas

Research institutes:

- 1) Reduce emissions from computing through efficiency gains & computing center location/cloud use
- 2) Make climate sustainability key part of institutional strategy

Funding organizations:

- 1) Ask that applicants discuss the climate impact in their applications
- 2) Virtualise committee work and interviews
- 3) Fund research on climate sustainability of research

Conference organizers:

- 1) Lower travel-related emissions by choice of conference location
- 2) Include online-formats (hybrid; in-person only every second year; always online)
- 3) Monitor, report and reduce emissions

Students:

Hold university management accountable

Academies, learned societies:

Become platforms to exchange knowledge and coordinate climate sustainability efforts across individual institutions and across disciplines

Ranking agencies:

Abandon a competitive ranking model for a collaborative threshold model

Policy makers:

Adapt procurement rules for public universities to enable climate sustainable choices

Recommendations: selected examples

Universities:

- 1) Use green energy on campus
- 2) Incentivize low-carbon forms of travel
- 3) Join sustainability network to exchange best-practise ideas

Students:
Hold university management accountable

Academies, learned societies:
Become platforms to exchange knowledge and coordinate climate sustainability efforts across individual institutions and across disciplines

Research institutes:

- 1) Reduce emissions from computing through efficiency gains & computing center location/cloud use
- 2) Make climate sustainability key

Individual academics:
Consider all your opportunities for leverage

Funding agencies:
Move from a competitive ranking model for a

Cooperative threshold model

Funding organizations:

- 1) Ask that applicants discuss the climate impact in their applications
- 2) Virtualise committee work and interviews
- 3) Fund research on climate sustainability of research

Policy makers:
Adapt procurement rules for public universities to enable climate sustainable choices

Conference organizers:

- 1) Lower travel-related emissions by choice of conference location
- 2) Include online-formats (hybrid; in-person only every second year; always online)
- 3) Monitor, report and reduce emissions

Summary: three key messages:

- The academic system is currently not climate sustainable.
- Individual stakeholders are taking first steps towards climate sustainability.
- There are many options of action available right now for all stakeholders to become more climate sustainable.
